

Toyota Forklift Parts

Toyota Forklift Parts - In the United States, Toyota Materials Handling inc., or TMHU, has been the top selling lift truck provider since 1992. This company has been situated out of Irvine, California for well over 40 years, offering a comprehensive line of quality lift trucks. With a first-rate reputation of durability and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the cornerstone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S. are manufactured here.

All Toyota machinery and components manufactured within North America adhere to the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to constant development, and its environmental methods. It is the first and only manufacturer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift trucks emit 70% fewer smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and policies.

Toyota Material Handling, U.S.A. - The Industry Leader

Brett Wood, President of TMHU, associates Toyota's accomplishment to its stout commitment to manufacture the best quality lift trucks while delivering the utmost customer service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." • TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's largest lift truck supplier and is amongst the magazines impressive World's Most Admired Companies.

Redefining Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich corporate doctrine of environmental stewardship in Toyota. Not many other companies and no other lift truck producer can meet Toyota's record of protecting the environment while concurrently stimulating the economy. Environmental accountability is an important characteristic of company decision making at Toyota and they are proud to be the first and only manufacturer to offer UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift trucks. Yet an added reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission standards, and also meets California's more involved 2010 emission standards. The finished invention is a lift truck that produces 70 percent fewer smog forming emissions than the existing Federal standards allow.

What's more in 2006, Toyota developed a relationship with the Arbor Day Foundation, furthering their dedication to the environment. Upwards of 57,000 trees have been planted in community parks and national forests damaged by natural causes such as fires, as a result of this partnership. 10,500 seedlings have also been distributed through Toyota Industrial Equipment's network of sellers to non-profit organizations and local consumers to help sustain communities all over the U.S.

Toyota's lift trucks offer better strength, visibility, productivity, ergonomics, and all the foremost safety technology that has made Toyota an industry leader. The company's System of Active Stability, also called "SAS"•, helps lessen the possibility of mishaps and accidental injuries, in addition to increasing productivity levels while minimizing the potential for product and equipment breakage.

System Active Stability is able to discern factors that might lead to lateral unsteadiness and likely lateral overturn. When one of these factors have been sensed, the SAS will instantly engage the Swing Lock Cylinder to re-stabilize the rear axle. This adjusts the lift truck's stability footprint from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also helps to prevent injuries or accidents while adding stability.

SAS was first launched to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Since then, SAS have been built-in to the majority of Toyota's internal combustion products. It is standard gear on the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in action, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with mandatory worker instruction, overturn fatalities across all designs have decreased by 13.6% since 1999. Also, there have been an overall 35.5% reduction in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's rigid standards continue far beyond the machinery itself. The company believes in offering general Operator Safety Training programs to help customers meet and exceed OSHA standard 1910.178. Education courses, video tutorials and assorted materials, covering a broad scope of topics-from individual safety, to OSHA regulations, to surface and cargo situations, are offered through the supplier network.

Toyota has sustained a continuous presence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, produced its 350,000th lift vehicle. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America at the moment are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of land. Facilities include a National Customer Center, as well as production operations and distribution centers for equipment and service parts, with the entire investment exceeding \$113 million dollars.

The new National Customer Center was conceived to serve both sellers and buyers of TMHU. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live merchandise demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's history since the birth of its founder, Sakichi Toyoda, in 1867, and finally a education center.

TMHU has 68 sanctioned industrial equipment dealers, along with 189 dealership locations throughout the United States, providing the most complete and inclusive consumer support and customer service in the industry. The company's new and Licensed Used lift trucks, service, parts, and financing capabilities make Toyota dealerships a one-stop shop to ensure total customer satisfaction.
